Technical Requirements

- *The system must run on cloud based virtual servers that dynamically scale CPU and memory to prevent scheduling delays.*
- *Cloud storage must utilize solid state drives to ensure fast data access and instant retrieval of student records.*
- *The back end should operate within a secure Linux server environment using object oriented architecture.*
- *A cloud hosted relational database must store all records for students, instructors, lessons, packages, payments, and DMV compliance information.*
- *Users must be able to access the responsive web application across any standard browser on mobile devices and computers.*
- *Centralized system monitoring and logging tools must be implemented to track system health and detect security issues.*
- *The platform must enforce TLS encryption, mandatory two factor authentication, and an automatic 30-minute account lockout after five failed login attempts.*
